**PRODUCTION**

**SYSTEMS AND SCIENCE FOR DISTRIBUTING HOT AND COLD MEALS**

Many years experience at the service of those who cook, handle, pack and distribute meals.

The study, design and development of logistically intelligent systems and the pre- and post-sales service are our strong points, the ability to interpret the needs of our customers paying particular attention to the reduction of their management costs, represent the added value of our service that has allowed us to become the partner of the leading protagonists of the professional group catering market.

# BREAKFAST

The thermo-refrigerated trolley for the distribution of personalised trays

.... from simple trolley to **distribution system!**

**Production is centralised,**

BREAKFAST is a very valid tool for transporting everything needed from the central kitchen to satellites such as dining rooms, departments or separate sites.

**It's totally closed,**

so it can also be transported over rough journeys since every item of food transported is perfectly insulated from the outside environment.

**It's versatile,**

since it ensures the space inside for all the necessary tableware (cups and saucers, plates, cutlery, etc. directly in dish-washer baskets) and the solid food (bread, rusks, jams, sugar, etc. in stainless steel or transparent polycarbonate containers).

The upper shelf is used for the three beverages needed to serve a complete breakfast in professional stainless steel thermal containers of various capacities.

**Production is decentralised directly to the departments,**

As well as transporting everything needed as described above, BREAKFAST integrates perfectly with automatic wall production systems allowing the breakfast to be produced directly in the department.

BREAKFAST also has adequate space to make the use of supplementary storage cupboards unnecessary.

**It can be personalised,**

indeed the closed lower section can be set up both for holding multi-portion baskets and containers and for holding breakfast trays already pre-prepared before the service leaving the operators with the sole task of serving the hot drinks.

**It's secure,**

in automatic distribution or where the route is not under the direct control of the assigned operators, the whole trolley (upper section and lower section) can be fitted with key locking. Only assigned personnel can access the meals using a universal key, preventing tampering or acts of vandalism by foreign parties.

VERSION WITH SHELVES FOR PLATES

VERSION WITH COVER CLOSED

VERSION WITH WALL DISTRIBUTION

---

## BREAKFAST, AN IMPORTANT MEAL

### Measurements,

length: **1070** mm

width: **620** mm

height without thermal containers: **910** mm

### Capacity,

upper shelf: max **3x10** litres

complete breakfast: max. **40**
